

# SINA RIAHI

Tehran, Iran • 09396030319 • sinariahi1382@gmail.com • github.com/Sinariahi

## PROFESSIONAL SUMMARY

Python developer specializing in desktop applications, business automation, data processing, web scraping, and workflow optimization. Experienced building production tools that automate repetitive operations, integrate with REST APIs, process Excel datasets, and generate business reports.

## TECHNICAL SKILLS

|                        |                                                                    |
|------------------------|--------------------------------------------------------------------|
| Languages              | Python, SQL, R                                                     |
| Frameworks & Libraries | Pandas, NumPy, SciPy, PySide6 (Qt), Pydantic, FastAPI              |
| Database & APIs        | REST APIs, PostgreSQL                                              |
| Automation             | Selenium, BeautifulSoup, Requests, nodriver                        |
| Tools                  | Docker, Git & GitHub, WordPress, Wireshark, Photoshop, Illustrator |

## EXPERIENCE

### Sales Department Manager | [Naria Gallery](#) May 2025 – June 2026

- Reduced repetitive tasks, improving accuracy and efficiency and eventually doubling the average sales.
- Developed 14 automation applications that reduced manual workflows and improved operational efficiency.
- Managed product photography and editing for online listings.
- Created sales analysis tools and generated management reports.

### Sales Supervisor | [Digikala \(Peaksale\) Division](#) August 2024 – May 2025

- Managed seller accounts on Digikala and optimized product listings.
- Conducted sales analysis to support business decisions.
- Assisted in content creation and product photography for marketing.
- Planned and managed promotional events for increased engagement.

## ■ MAJOR PROJECTS

---

### MyPal — Modular Desktop Utility & P2P Ecosystem

Rust, Tauri v2, TypeScript, React 19, Tailwind CSS

- Architected a lightweight, modular Windows utility using Rust (Tauri v2) and React 19, keeping the core executable lean with only essential system diagnostics and delegating secondary tools to dynamically loaded external modules.
- Engineered an external sandboxed plugin loader with runtime dependency injection, dynamic script evaluation, and IndexedDB caching, allowing users to drop in or hot-swap third-party plugins (manifest.json + bundled code) with zero core rebuilds.
- Implemented a zero-configuration mobile-to-PC file transfer and clipboard bridge via WebRTC/WebSocket data channels and QR-code pairing, completely bypassing cloud intermediaries for low-latency local sharing.
- Integrated deep OS-level Windows APIs including global keyboard hook accelerators, system tray lifecycle handling, wake-word activation, multi-monitor bounds detection, and an audited IPC bridge.
- Automated CI/CD build scripts (PowerShell, Batch, Inno Setup) automating standalone multi-artifact distribution (mypal.exe + modular zip distribution) and enterprise-grade Windows installers with firewall rule registration.

### Utilities Suite — Web Productivity & Media Engineering

TypeScript, Node.js, Web Audio API, HTML5 Canvas

- Architected and deployed an all-in-one suite of high-performance, client-side web tools focusing on advanced document processing, media transformation, and secure peer-to-peer sharing with zero required backend dependencies.
- Engineered MD Studio, an advanced split-screen Markdown IDE supporting live rendering, syntax highlighting, LaTeX/KaTeX mathematical typesetting, Mermaid flowchart rendering, and export to PDF/HTML.
- Developed a fully responsive view engine for MD Studio featuring adaptive gesture switching on mobile devices, live document statistics, customizable themes, and automated local document caching.
- Built dedicated micro-tools including Audio Forge (a lightweight in-browser audio editor), Image Forge, QR Forge, PDF to Markdown text extraction, and secure room-based P2P File Transfer.
- Optimized client-side performance and latency by implementing pure in-browser file parsing and encoding, eliminating server transfer costs and ensuring 100% user data privacy.

## Task Master — E-Commerce Automation Platform

Python, PySide6, FastAPI

- Designed and developed a modular desktop platform for e-commerce automation, inventory management, reporting, and business workflow optimization.
- Architected a scalable application consisting of 6 integrated modules with reusable components and a maintainable, extensible codebase.
- Implemented multithreaded background processing, REST API integration, and automated Excel data pipelines for efficient data collection and analysis.
- Built an enterprise-style desktop interface using PySide6 (Qt), emphasizing usability, performance, and maintainability.

## ■ ADDITIONAL PROJECTS

---

- Web Scraping Engines
- Telegram Automation Suite
- Product Image Processing Pipeline
- Smart Reorder Recommendation System
- Desktop Workflow Automation Suite
- Competitive Intelligence Dashboard

## ■ EDUCATION

---

### Bachelor of Computer Science

Kharazmi University

Graduated in 2026

Average: 17.08/20

## ■ LANGUAGES

---

**English:** C2, full fluency

**French:** A2, fundamental knowledge

**Persian:** Native

## ■ VOLUNTEER EXPERIENCE

---

### Student Member

2024 – 2025

#### Association for Computing Machinery (ACM)

- Participated in technical workshops and programming events.
- Engaged with the computer science community through ACM activities.
